

QUALITY EVENT FLOORING SYSTEMS

I-TRAC™

EXTREME IN EVERY WAY,
I-TRAC CAN DO IT ALL.

EXTRA HEAVY-DUTY PORTABLE ROADWAY AND FLOORING SYSTEM

I-Trac is a state-of-the-art modular infrastructure system with a patented interlocking design that creates a contiguous surface capable of carrying extreme loads over virtually all ground conditions. I-Trac can be deployed as temporary roadway or event surface – even as a helipad or tarmac. The advantage that I-Trac offers in comparison to alternative products is its extreme strength-to-weight ratio. Each panel weighs only 38 pounds and is manually deployable. Installation is quick and easy, requiring no special skills or equipment.

I-Trac is inert to most chemicals and offers a good level of electrical insulation, making it ideal for everything from concert sites to construction sites, to military applications.

FEATURES & BENEFITS

- Most flexible and highly capable roadway systems on the market
- Extreme strength-to-weight ratio
- Each panel weighs only 38 pounds
- Quick and easy to install and strike without skill or equipment
- No equipment required for installation
- Flexible design allows for manual deployment or mechanical deployment in pre-assembled sections
- Translucent to allow natural turf to thrive – even connectors are translucent

APPLICATIONS / INDUSTRIES

- Turf protection
- Graduations
- Concerts
- Galas
- Sporting Events
- Temporary roadways
- Remote access
- Helicopter operations
- Temporary tarmacs

QUALITY EVENT FLOORING SYSTEMS

I-TRAC™

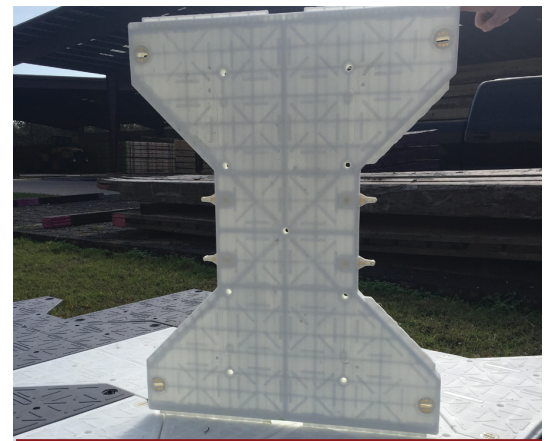

EXTREME IN EVERY WAY,
I-TRAC CAN DO IT ALL.

PERFECT FOR EVENTS AND ENTERTAINMENT VENUES.

I-Trac is the ideal base to build temporary staging and create a strong rigid surface to deliver vehicles, trucks and other heavy equipment, while still providing a pedestrian walkway or event floor protecting sensitive surfaces indoors or out. I-Trac is fast becoming the temporary flooring and matting solution of choice by concert promoters worldwide.

I-Trac is a composite interlocking panel system that creates a **non-jointed** surface. This is important because there are no four-corner weak points in an assembled roadway or pad. There are also no pivoting joints that can cause rutting under traffic. Quality Event Flooring Systems offers half-pieces of I-Trac mats for a straight-edged assembly. We also offer edge ramps at vehicle access points.

GOOD FOR PEOPLE AND FOR TURF

TOP: I-Trac panels and connectors are translucent, allowing natural turf to thrive. BOTTOM: Half-pieces are available for straight-edged assembly.
